Microsoft Exchange Server 2007

We are often asked what a Microsoft Exchange Server is and whether it's suitable for a company. The answer varies from one client to the next, depending on specific situations. Microsoft Exchange Server is a messaging and collaborative software product. It is widely used by enterprises and businesses; Exchange's major features consist of electronic mail, calendaring, contacts and tasks, support for mobile and web-based access to information, and support for data storage.

The new MS Exchange Server 2007 includes Unified Messaging which integrates different streams of communication (e-mail, fax, video, SMS, voice, etc.) into a single, or unified, "message store" that is accessible from a wide range of different devices. Through unified messaging, users can increase productivity by using a wide range of devices. The best part is the mobility, which allows users to utilizing time that might otherwise have gone to waste.

There are more than just a few ways that unified messaging features of Exchange Server 2007 deliver benefits, including communication integration and increased information accessibility. If you are interested in finding out more we will be happy to discuss how this solution can benefit your company.

Blackberry Storm

Research in Motion Ltd. is rolling out its first real answer to Apple Inc.'s iPhone, the touch-screen BlackBerry Storm, which will work on broadband networks on both sides of the Atlantic and be exclusive to Verizon Wireless in the U.S.

The Storm has a 3.25-inch screen -- just under the iPhone's 3.5 inches -- and a durable design that

Secure Your Identity

In today's cyber world, finding out the answers to the security questions needed to retrieve someone's password are quite simple. In a generation where the vast majority has a blog, Facebook, LinkedIn or some sort of public forum where they post the minute details of their lives, it is easy for anyone with access to Google to retrieve personal information about someone. Questions like 'what is your high school mascot' or 'what city were you born in' can be figured out within about an hour.

Markus Jakobsson of Palo Alto, California has developed a security application known as Blue Moon Authentication. This application asks questions based on preference rather than factual questions about a person. Answering 11 out of 16 questions correctly would indicate that there is a 99.5% chance that the person is who they say they are.

You should always limit the amount of information you share online. We recommend limiting access to social networks such as Facebook to your friends. Furthermore, refrain from sharing birthdays, names of pets, birthplaces, etc., and do not use them in your password or as hints.

makes it about 16% heavier than the iPhone. It will run on relatively quick third-generation broadband networks. But it doesn't have Wi-Fi Internet access, which RIM said would drain battery life unnecessarily.

Multiple Display Configurations

Think 19" inch monitors are the standard configuration for the newest desktop computers? Well guess again. A new trend is emerging and it is truly a sight to see. Multiple Display Configurations, such as the ones shown here, allow the viewer to see multiple montors simultaneously. They allow the user to easily position the height and angle of their monitors for maximum comfort and productivity.

Dual vertical, dual horizontal, triple horizontal and quad configurations are available.
